

**Palak J. Trivedi**

Palak Trivedi is a Clinical Lecturer from the University of Birmingham, with a special interest in chronic cholestatic liver disorders. Palak works closely with the UK-PSC, International PSC and Global PBC Study Groups; evaluating how variant phenotypic presentations impact disease progression, and the way in which on-treatment biochemical responses correlate with clinical outcome.

Most recently, Palak is involved with studying how dysregulated mucosal immune responses affect the clinical course that patients with PSC experience, identifying putative therapeutic targets and circulating biomarkers stratifying high vs. low risk populations.
