Faculty: Liver Injury and Cancer Program

Centenary Research Institute

University of Sydney

RPAH

Sydney Australia

Professor Geoff McCaughan is a physician scientist in the fields of Liver Transplantation, Liver disease and Liver pathobiology. At a basic research level he has lead a team that has made fundamental discoveries in understanding liver transplant tolerance, gene expression in human liver diseases and the biology of the Dipeptidyl Peptidase Gene family. Current research is aimed at new therapies for liver cancer and understanding the liver Stem cell response. At a clinical level he is involved in clinical studies in Liver Transplantation, HCC, End stage Liver Disease and clinical trials in HCV. He has published over 450 papers in basic research and clinical medicine. He was President of the International Liver Transplant Society 2007-2008 and President of the Transplant Society of Australia and New Zealand 2013-2015. He has been a previous Williams –Calne lecturer at BASL
